

Course Outline

Environmental Awareness Training

Pollution Prevention & Spill Response

Duration

½ Day

Who Should Attend?

This half day programme is designed to be an ideal introduction for pollution prevention and spill response teams or environmental management teams, particularly within construction and manufacturing environments.

What Is Covered?

Onsite issues such as pollution and spillages do occur and can have an adverse effect on your organisation or business. This course is designed to provide delegates with an understanding of how to safely and responsibly control these types of incidents in the workplace to minimise any potential damage.

Learning Outcomes

- Describe the type of environmental pollution risks that can occur in site
- Outline the key factors that influence effective pollution prevention (financial, legal & moral)
- Identify potential environmental emergency situations
- Explain the importance of minimising the risk of environmental damage
- Describe how to record, respond to, and learn from an environmental emergency
